

MUSIC APP

Design 1

Design 2

Note: These designs are for insight. You can use/modify any if you want or find another.

INSTRUCTION

Description: Create an app that displays a list of a minimum of 5 songs. Users should be able to play songs by clicking on them from the list. Users should be able to pause, and repeat songs.

1. Create a repo called “**music-app**” in your GitHub account
2. Clone the repo to your machine
3. Create the following files in the cloned repo: **index.html**, **style.css**, & **script.js** and link them
4. Create a folder called **assets** in the cloned repo and create the following folders in the assets folder: **music** and **img**
5. In your **music** folder, upload all your songs
6. Implement the functions of **playing**, **pausing**, and **repeating** songs
7. Design your app
8. Test and make sure it's working
9. **Push** the project to GitHub, create a **GitHub page**, and share the link in the group

OUTCOME

This project will help you achieve the following:

- Get more familiar with DOM manipulation
- Do more practice with EventListeners
- Using in-built JS functions and methods: Math, setInterval(), clearInterval()
- Understand Function parameters
